

AFM 220FH

AFM 220FH is a fast and efficient felling head for felling and clearing operations. The grapple jaws of 220 FH are designed for steady holding and loading. The head is equipped with .404" or 3/4" saw unit. Optional multi tree handling grapples allow accumulating several smaller stems in the head before felling them on the ground. AFM 220FH can be optionally attached with a continuous rotation rotator which improves the handling of the felling head.

AFM 220FH can be installed on a large variety of base machines such as wheeled harvesters, small size excavators, combo machines and forwarders.

Felling diameter	Max. 58 mm	Working pressure	240 bars
Cutting mechanism	Chain saw	Electrical system	24 V
Saw bar length	Max. 67 cm	Base machine power	min 60-80 kW
Optimum tree size	10-40 mm	Base machine Oil flow	160-200 l/min
Accumulator opening	660 mm	CAN-bus based control system	
Grapple opening	950 mm	Optional:	
Grip area	0,15 m ²	-3/4" saw unit	
Weight from	720 kg	-Multi tree handling arms
